## AlloPatch® Pliable: Diabetic Foot Ulcers

MTF Biologics recently completed a multi-center, prospective, randomized, controlled clinical trial evaluating the use of AlloPatch® Pliable in chronic diabetic foot ulcer (DFU) applications. As an advanced treatment option, AlloPatch Pliable significantly outperformed the use of standard of care (SOC) alone. But, don't just take our word for it, check out the stats.

### Significantly more effective than the standard of care alone

**80%**  
of wounds  
healed in  
12 weeks

**3.2cm<sup>2</sup>**  
average starting  
wound size

AlloPatch Pliable + SOC  
not only healed 80% of the  
wounds treated at 12 weeks,  
but also significantly  
outperformed SOC alone  
at each time point.

#### Percentage of Wounds Healed Over Time

■ SOC Alone (n=40) ■ AlloPatch® Pliable + SOC (n=40)

Zelen CM, et al. *Int Wound J.* 2018 Apr 22. doi:10.1111/iwj.12920

\* p-value 6 weeks: p=0.0000027, p-value 12 weeks: p=0.0000084

## A fraction of the cost of other options

**90%**

more cost effective  
 than Dermagraft®

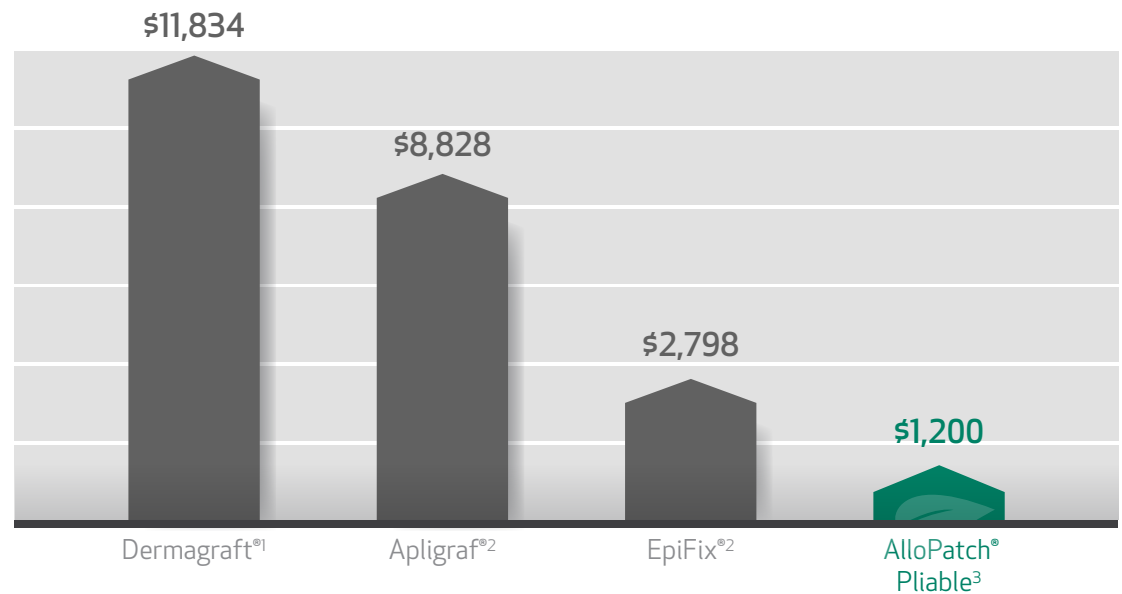

**86%**

more cost effective  
 than Apligraf®

**57%**

more cost effective  
 than EpiFix®

Mean Graft Costs to Closure at 12 Weeks (\$USD)

<sup>3</sup>Zelen CM, et al. *Int Wound J.* 2018 Apr 22. doi: 10.1111/iwj.12920

## Faster healing rates and fewer treatments

**~1/2**

the time  
 to closure

Not only did AlloPatch Pliable + SOC heal more wounds, it did so faster. On average, AlloPatch Pliable + SOC can save up to 4 dressings as opposed to SOC alone.

Number of Weeks to Closure

AlloPatch® Pliable + SOC

SOC Alone

The average starting wound size for AlloPatch Pliable was 3.2cm<sup>2</sup>, which is almost 2.5x the average DFU size<sup>4</sup>
